

No Discharge Certification

The No Discharge Certification form is for the inactivation of a Kentucky Pollutant Discharge Elimination System (KPDES) permit or for specific outfalls of a KPDES permit. On the back of this form is a list of often-overlooked wastewater sources that require a KPDES permit. Please review this list to determine if a KPDES permit is required. If a KPDES permit is no longer required because the facility no longer discharges to waters of the Commonwealth or is approved for an alternate means of wastewater disposal, complete the information requested on the form.
